GOWTHAM G

AI & DATA SCIENCE GRADUATE · SOFTWARE DEVELOPER

9952605003 | gowtham250211@gmail.com | linkedin.com/in/gowtham-g-299132308 | github.com/gowtham250211-png | Vellore, Tamil Nadu

EDUCATION

Annai Mira College of Engineering and Technology — Sep 2022 – May 2026
Ranipet, Tamil Nadu
B.Tech – Artificial Intelligence and Data Science; CGPA: 8.37

TMKV Government Boys Higher Secondary School — Jun 2021 – May 2022
Vellore, Tamil Nadu
SSLC – Percentage: 78%

Vidyaniketan Matric Higher Secondary School — Jun 2019 – Apr 2020
Vellore, Tamil Nadu
HSLC – Percentage: 80%

SKILLS SUMMARY

LANGUAGES	Java · Python (Foundational) · SQL · JavaScript · HTML · CSS
FRAMEWORKS	Spring Boot • React.js • Bootstrap
BACKEND/API	REST APIs • Spring Security • JPA
DATABASE	MySQL • PostgreSQL
TOOLS	Git • GitHub • Postman • IntelliJ IDEA • VS Code • Docker • Docker Compose
PRACTICES	AI/ML Fundamentals · Python Data Analysis · Agile · Unit Testing · CI/CD
SOFT SKILLS	Problem-Solving • Analytical Thinking • Adaptability • Communication • Teamwork

PROJECTS

Employee Performance & Task Management System (EPTMS) — Jun 2026 – Aug 2026
Full-Stack Enterprise Web Application

- Architected an enterprise management platform with a 4-tier Role-Based Access Control (Admin, Manager, Team Leader, Employee) architecture using Java 21, Spring Boot 3, React.js, and PostgreSQL.
- Implemented stateless authentication and authorization using Spring Security 6 and JJWT with BCrypt password encryption and method-level pre-authorization.
- Designed a domain-driven task delegation system with sector partitioning, interactive sprint Kanban boards, and a gamified performance engine (+15 XP per deliverable).
- Built a multi-level leave governance workflow enforcing organizational reporting hierarchies with automated balance calculation and immutable audit trails.
- Containerized the full-stack multi-service architecture using Docker and Docker Compose (Spring Boot, React/Vite, PostgreSQL 16) for seamless deployment.

Self-Healing Logistics System — Feb 2026 – Mar 2026
Logistics Automation Project

- Designed and developed a smart logistics platform using Java, Spring Boot, React.js, MySQL, and REST APIs for automated disruption detection and recovery.
- Implemented scheduled shipment monitoring to detect delays and failures and trigger automated recovery workflows.
- Developed a self-healing recovery mechanism that assigns backup vehicles and alternate routes when shipment disruptions occur.
- Built a real-time shipment tracking dashboard with GPS-based monitoring and REST API integration using React.js.

Weather API Application — Jan 2026 – Feb 2026
Web Development Project

- Created a responsive weather forecasting interface by integrating public REST APIs.
- Displayed real-time temperature, humidity, and wind data with dynamic UI updates.

INTERNSHIP EXPERIENCE

Femtosoft Technologies | **Full Stack Developer Intern** — Jan 2026 – Apr 2026

- Developed full-stack applications with React.js and Spring Boot REST APIs in a microservices architecture, improving scalability and reducing deployment time.
- Enhanced backend performance by optimizing MySQL queries, improving query response time.
- Worked in Agile environments using JIRA; supported CI/CD pipelines.

CERTIFICATES

Full Stack Java Development — Simplilearn
Built and deployed full-stack applications, covering front-end, back-end, and database integration.

Python Data Analysis — LinkedIn Learning
Learned data manipulation, cleaning, and analysis techniques using Python.

Spring Framework Specialization — Infosys
Covered Spring Boot fundamentals including REST APIs and Spring Data JPA.
